

Greenville Utilities Commission

Greenville, North Carolina

Notice of Request for Proposals For Greenville Utilities Commission ERP

GUC Addendum # 1 (Dated 6/30/11)

Several inquiries have been made regarding GUC's operating systems and platforms and whether there are constraints that would limit the vendor from proposing alternatives. Specifically the following section in the RFP, second bullet should be removed; this item is not intended to be a "Minimum Requirement".

5.1 Minimum Requirements of Proposer

Following are the minimum qualifications for the proposer to be considered for this proposal:

- The proposer must have the proposed solution installed and in production in at least fifteen (15) utility and/or public sector organizations in the United States. Five (5) of these references must have been completed within the past five years and at least one must be in production with the proposed current version. References of similar size and multi-utility comparable to GUC will be given precedence.
- ~~A solution utilizing Microsoft SQL Server (preferably SQL 2008 or higher) as its database management system.~~
