

We make sure natural gas travels safely to our community and homes.

Every day, natural gas pipelines safely carry one of the world's cleanest, most efficient and reliable fuels to businesses and homes like yours. Whether you are a GUC natural gas customer or not, you probably live and work near underground gas pipelines that run under streets, sidewalks and yards. GUC maintains more than 940 miles of natural gas pipeline throughout Pitt County.

State and federal pipeline safety regulations are tougher now than ever, and today's pipelines are constructed of better materials and better technology than ever before. Among all pipelines, natural gas pipelines have the best safety record.

Pipeline emergencies such as a natural gas leak or accident are extremely rare. Preventing pipeline emergencies is critically important to Greenville Utilities, and we are responsible for keeping our portion of the delivery system safe. From design and construction to operations and maintenance, natural gas utilities like ours set high standards to keep natural gas pipelines incident free. That's why, in addition to following state and federal safety regulations, we sponsor public education programs, meet regularly with public and emergency officials and perform system inspections using sophisticated leak detection equipment.

Though natural gas pipeline incidents are uncommon, you should know their signs so you can do your part to prevent a pipeline emergency.

The leading cause of accidents on the pipeline delivery system is hitting a line when digging or trenching. Remember, if you do any digging—no matter how small—North Carolina State law requires you call NC One-Call at 1-800-632-4949, or you may call the new federally-mandated national "Call Before You Dig" number - 811. Call either number at least two working days in advance so all utility lines can be professionally marked prior to digging.

For more information on natural gas safety, please contact GUC at 551-1587 or visit us at www.guc.com.
