

Who We Serve: Wastewater

Greenville Utilities provides wastewater service to all residents of the City of Greenville and we provide wastewater treatment service to the towns of Grimesland and Bethel.

To the north, we serve customers up to where NC 11 (Memorial Drive) intersects with NC 903. The Town of Bethel collects wastewater from its residents and pumps it to GUC for treatment.

To the east, we serve the area surrounding Bradford Creek and Pactolus School. The Town of Grimesland collects wastewater from its residents and pumps it to GUC for treatment.

Moving southeast, we provide service to the River Hills Subdivision and the Arbor Hills Subdivision, but do not serve residents in the original section of the Windsor Subdivision.

To the south, we serve along Fire Tower Road, with the exception of Cherry Oaks and Camelot Subdivisions. Winterville, Ayden and

Grifton are part of the Contentnea Metropolitan Sewerage District.

To the southwest, we serve the area surrounding Thomas Langston Road, up to the Gatewood Subdivision and along Frog Level Road from Forlines Road to US 13.

To the west, we serve the Lake Ellsworth area, Westgate Subdivision and extending on NC 43 to include Ironwood. Farmville has its own system and serves Fountain as well.

In rural areas, not served by a town or GUC, septic tanks are used.
