

**GREENVILLE UTILITIES COMMISSION**  
**QUESTIONS AND ANSWERS II FOR 26-35**  
**FOR SODIUM HYDROXIDE BULK CHEMICALS**  
**6/16/2026 @ 2:00 PM**

1. How many dry tons were ordered or used in the past 12 Months (6/1/25-5/31/26)?

Approximately 503 Dry Tons during that period.

2. The bid docs state the "typical" quantity per delivery is 45,000-48,000 lbs, which would be a full truck load. Could you please confirm that full truck loads are in fact ordered every time? If partial loads are sometimes ordered, could you please estimate how many times per year that may occur?

Full Loads Only.

3. How many tanks will each delivery need to be unloaded into?

One full load is offloaded into one bulk tank.

4. It says that the estimated quantity for 6 months is 330 dry tons, however on the Proposal Form (pg. 13), it looks like we are being asked to quote an annual quantity of 525 dry tons, even though it is a 6 month contract. Can you please just clarify the expected quantity for the 6 month period?

Contract is six months with an option for multiple renewals up to two years. Average quantity is approximately 250 dry tons every six months. Due to variable raw water quality, the quantity may exceed 325 dry tons every six months.
